Writing in Gujarati

Here is a quick primer on writing in Gujarati. Let me know if you need any additional clarification.

Go to your internet browser and type or paste the following:

http://www.google.com/transliterate/gujarati

and you will see the following screen:

Type Maru nam che Manu or (your name) and you will see the following screen.

It is as simple as that. However, you can change your key board to type in Gujarati using phonetic Gujarati just as I did before. You have to download and install IME:

http://www.google.com/ime/transliteration/

and choose Gujarati.

Once the IME is installed on your computer, you will have to add Gujarati language button on your tool bar. See below wiki explanation of IME.

See the tool bar at the bottom of the last screen shot. You can now click the language bar to Gujarati and start typing in Gujarati like this: HIZ oll H & Hoj. You type in English and it will translate to Gujarati. You will also have access to a dictionary and Gujarati alphabet.

A number of you have asked about this and so I have tried to make it as easy as I can for you to follow. I have done this a few times and I can tell you that you will find this quite easy to follow and amazing facilities at your finger tip. Please try it and see if you can follow this and let me know if I need to make any corrections or add more information. We will appreciate your feedback. We would like to eventually post this on the Gujarati Samaj of Baltimore website as a PowerPoint presentation.

Thank you kindly.

Manu
